Ageing Gracefully

With increasing life style changes, early onset of health disorders such as **Diabetes, High BP, Heart Attack & Failure, Kidney & Liver Damage, Paralytic Strokes, Obesity - Excessive weight, Allergies, Arthritis, Osteoporosis, Forgetfulness, Depression** etc is now very common. Most of these conditions can be avoided or delayed by **modifying lifestyle** and adding **supplements** to diet. We have a few **Preventive Health Profiles** consisting of various **Blood and Urine tests**, results of which may help your **PHYSICIAN** monitoring your health status and ageing process rather objectively.

Available Preventive Health Profiles

If you are interested in getting any of these profiles, please consult your **PHYSICIAN** who may recommend a profile as per your requirement. You may also contact the laboratory for details or visit us in a Fasting state (10 to 12 hours after taking dinner) on any working day. You will have to submit a Blood & a Urine sample (collected at home in a sterile bottle). The test report will be ready by evening and can be sent to you by email. You should consult your **PHYSICIAN** for Interpretation, further investigations, and management.

Stop COVID

Your safety is our priority. Strict safety infection control protocols are implemented. Kindly co-operate. We care for you. #StaySafe

COVID-19 Antibody Test

The **COVID-19 Antibody Test** is a blood test to detect antibodies (development of immune response only) against the **SARS COV-2 Virus (Coronavirus)**. It generally becomes **POSITIVE 3-4 weeks after COVID-19 infection** or exposure. The **COVID-19 Antibody Test** should not be used for purpose of diagnosis.
